

1. The University of Maryland Policy on Intellectual Property provides that an individual student owns

A. all rights, title and interests, including all rights under copyright, in works an individual student creates in connection with his or her courses whether or not the student uses University Resources. This means a student who writes a paper or report, creates a design or software, algorithm or other copyrightable work in the performance of course work owns the intellectual property rights – the copyright -- in those works.

B. all rights, title and interests, including all patent rights, in inventions an individual student conceives or reduces to practice in the performance of course work whether or not the student uses University Resources.

2. When one or more students jointly create a copyrightable work or jointly conceive an invention, they own the intellectual property rights – copyright or patent rights -- jointly.

3. Since project reports are likely to be developed by one or more students, the copyright in the report will be jointly owned by the report authors. As copyright holders in the report, the authors should

A. Include a copyright notice on the report; i.e.:

Copyright 2015 student A and student B.

B. As the owners of copyright in the report, each author acquires the following rights: the right to (a) reproduce the report, (b) distribute/release the report, (c) post the report on a website, and (d) incorporate portions of the report in another paper an author writes or modify or expand on the report. Authors may exercise these rights jointly or independently of one another without having to obtain permission from the other authors. Authors may also give someone else permission to exercise one or more of these rights.

C. If one or more authors want to release the report to a company, for example, the author(s) should include with the copyright notice a description of what the company may do with the report. For example:

- Company may reproduce and distribute this report to its employees for personal or internal company use. Company

may not distribute the report outside the company or use it for commercial purposes without prior permission from one of the copyright holders. Company does not acquire any rights or interests in the report other than those specified here.

Authors may also elect to use a Creative Commons license. This nonprofit organization promotes “sharing and use of creativity [copyrightable works] and knowledge through” the use of standardized, easy to understand licenses or permissions. <http://creativecommons.org/>. CC licenses enable you to choose whether to allow third parties to modify your work, relicense your work, or use it for commercial purposes, all subject to certain conditions.

D. Students should remove patentable from a report before releasing it to a third party. And students must remove confidential or proprietary information students received from someone else before releasing the report to anyone other than the person who owns the confidential information.
